INTERNET BANKING TAILORED TO YOUR REQUIREMENTS

Profit from the partnership of Ingres, NETinfo and Rodan Systems

INGRES

An intelligent approach to Internet Banking

BEING ABLE TO OFFER INTERNET BANKING FACILITIES TO CUSTOMERS IS BECOMING A KEY FACTOR IN REMAINING COMPETITIVE.

Benefits include:

Low cost
- No upfront licence fees
- Annual subscription for 24x7 support
- Easier administration

Fast installation
- Single installation – up and running within minutes
- Less resources required
- Easier configuration
- Built-in security

Simple management
- One maintenance charge
- One vendor for support
- Consolidated patches and change management

Robust feature set
- Fully featured database
- Comprehensive Business Intelligence suite
- Proven reliability and availability
- Scalable
- Remote hosting capability

However, implementing Internet Banking in line with the ongoing compliance requirements of both the national and international community can be a complex and demanding undertaking. By implementing such a strategic customer channel, Banking and Financial organisations can benefit by:

- Attracting new clients
- Reducing operational cost
- Enhancing customer service
- 24x7 banking facilities accessibility
- Detailed transaction history at customers' fingertips
- Universal customer profile
- Group single sign on - gives access to many countries

That is why Ingres has formed a three-way partnership with industry experts, NETinfo and Rodan Systems, to offer a single source Internet Banking solution that can be tailored to your needs.

Accelerate Business Intelligence implementation and reduce total cost of ownership

Ingres Icebreaker™ Business Intelligence Appliance

The first fully integrated, enterprise-class database and operating system package, Ingres Icebreaker integrates the proven enterprise strength of Ingres 2006 with an rPath Linux operating system to reduce complexity and maximise resources.

It incorporates a ready to run Business Intelligence Suite that delivers a wide range of operational reporting and functionality. As a result, organisations can quickly create, store, schedule, distribute, share, drill-down and interact with reports.

Strengthen delivery channels, increase productivity and reduce operational and communication costs.

NETteller Online Banking System from NETinfo

The NETteller Online Banking System offers a vast array of services to all types of clients (private and commercial), within a common operating environment. This saves a bank from having to maintain two or more parallel electronic banking systems in order to serve different client categories.

Benefits include:

· State-of-the-art online banking solution
· Fully customisable
· Extremely capable, stable and scalable
· Private and commercial online banking within a common operating environment
· Application service model – one installation – many banks
· Flexible interfacing mechanism with third party products
· Easy to integrate with existing back-end systems
· Platform independent
· Highly secure (provides support for different authentication mechanisms)
· Customer segmentation

NETinfo NETteller e-banking solution modules comprise:

• **NETteller Internet Banking** – A web-based application using the web-browser and the worldwide web for delivering online, real-time banking services to its users.

• **NET-TAN Security Authentication Server** – An advanced two-factor authentication module which will drastically reduce the incidence of online identity theft, phishing expeditions, and other online frauds.

• **NETteller SMS Banking** – SMS based application using cellular technology for delivering online real-time banking services to its users.

• **NETteller PC Banking** – A PC-based application using pc-client software and a standard dial-up connection to the worldwide web for delivering asynchronous banking services to its users.

• **NETteller ATM Gateway** – A software-based gateway that links the existing ATM network with a bank's backend system or any other applications.

NETinfo's main Banking/Financial customers include:

· Alpha Bank (Cyprus)
· Alpha Bank (Albania)
· Bank of Cyprus (UK)
· Bank of Cyprus (Romania)
· Bank of Cyprus (Cyprus)
· Bank of Cyprus (Greece)
· National Bank of Greece (Cyprus)
· Eurobank
· Western Union – CY
· Western Union – UK

NETteller's interface module (Abstract Module) allows for smooth interfacing with backend systems including Card Management, Core Banking, CRM, IVR and ATMs.

Benefit from specialist application software and support

Rodan Systems OfficeObjects® portfolio

Rodan Systems is one of Poland's most innovative IT companies. It specialises in the development and implementation of application software, based on its proprietary OfficeObjects development platform. The company's products are safe, high quality and incorporate the latest trends and technologies.

The OfficeObjects product portfolio includes:

- OfficeObjects® Intelligent Content Manager - to store, categorise, search and present various types of information
- OfficeObjects® e-Forms – to define and process electronic forms
- OfficeObjects® WorkFlow – for business processes management
- OfficeObjects® Document Manager – a solution for handling correspondence and enabling total document flow control.

A reputation you can trust

- European Commission prize in the category of Poland's small and medium enterprises.
- Rated 6th in '100 Most Innovative Polish Companies of the year 2005' ' published by 'Rzeczpospolita'.
- The only Polish company represented in the Board of the European Technology Platform NESSI (Networked European Software & Services Initiative) – a group of companies made up of almost one million employees and collectively generating 300 billion Euros in annual revenue.
- Participated in several European IST Framework Programme projects and is currently involved in three eGovernment research projects.

The right tools to create the right solution

Because all banks have different needs, through this partnership we are able to offer you the right mix of products and services for your business.

The Ingres Icebreaker™ Business Intelligence Appliance and the NETteller Internet Banking Solution are both available as either standalone solutions or can be purchased together as a bundle. While Rodan Systems, as an Applications Service Provider, can offer the software and implementation support required.
